## TO WHOM IT MAY CONCERN

I write to confirm that John Romanous & Associates have been consulting engineers on a high percentage of our completed projects in the last decade for both structural and hydraulic design and documentation.

Our projects are predominantly new residential developments and range from single dwellings to multi-level apartment buildings where we have involvement from the concept design to the procurement of the buildings and associated structures. John and his team have assisted us during all stages of our work and have successfully provided the following services for both structural and hydraulic disciplines:

- Design advice and conceptual drawings;
- Development Application drawings, detailing and certification;
- Construction Certificate drawings, detailing and certification;
- Dilapidation Reports (structural);
- Stormwater drainage reports and flood study analysis (hydraulic);
- Site management, erosion and sediment control and other miscellaneous plans and documentation;
- Site inspections, site instructions and certification.

At all times their service and professionalism has been nothing short of exceptional. The knowledge and expertise of John and David Romanous in their respective fields is wide spread and they are to be commended; in particular their design and detailing solutions are always practical and stem from extensive experience.

We intend to continue to invite John Romanous & Associates to provide their service as part of the consultant team on our projects and would not hesitate in recommending their services to others.

Yours faithfully

Alec Pappas Architects Pty Ltd
